

SUMMARY OF QUALIFICATIONS AND SKILLS

Experienced complex systems engineer, focusing on control systems design and testing, model development, and machine learning in control. Currently pursuing a Ph.D. in complex systems and information propagation.

KEY PERSONAL AND INTERPERSONAL ATTRIBUTES

- Skilled in statistical analysis with Python, R, MATLAB, and LabVIEW, delivering data-driven insights.
- Experienced in embedded systems programming, including Atmel chips, and PLC platforms (LOGO, Siemens Step 7).
- Strong analytical, problem-solving, and critical thinking abilities across complex tasks.
- Proven leadership in project support, team motivation, and achieving successful outcomes.
- Excellent communication and collaboration skills, fostering productive cross-functional teamwork.

SUMMARY OF EDUCATION

- **Ph.D. – Computational Science** University of Ottawa **2021 – 2026 (exp'd)**
 - Thesis Title: Fostering Consensus using Social Contagion
 - GPA: A+
 - Granted a direct Ph.D. path from a bachelor's degree
 - Awarded a full admission scholarship and a merit scholarship from the University of Ottawa
- **B.Sc. – Electrical Engineering** **2014 - 2018**

RESEARCH AND PROFESSIONAL EXPERIENCE HISTORY

Project Manager **2024 Sep – Present**

Centre for Entrepreneurship and Engineering Design, Ottawa

- Manage four groups of brilliant students to understand, design, and create accessibility devices.
- Review documentation and provide feedback to groups to ensure they meet client needs.
- Monitor the groups' design process and project management timeline.
- Coordinate procurement for the students' products to support the project's implementation.

Search Engine Evaluator **2024 Jun - Present**

TELUS International

- Analyzing search engine results to ensure they meet the specified relevance, accuracy, and comprehensiveness criteria.
- Reviewing web pages and online content to determine their quality, reliability, and user-friendliness.
- Ensuring that search results and content are culturally relevant and appropriate for the target audience.
- Staying updated with the latest search engine algorithms, web trends, and internet best practices to provide accurate assessments.

Research and Teaching Assistant **2022 Jan– Present**

University of Ottawa

- Been the teaching assistant for the following courses: Mechatronics, Biomedical Systems Dynamics, System Dynamics, and Machine Learning for Control Systems.
- Supported professors in lectures, labs, and course administration by preparing materials, leading discussions, grading assignments, and tracking student progress.
- Conducted literature reviews, data collection, and analysis using statistical software to contribute to research objectives.
- Assisted in designing experiments, managing lab equipment, maintaining compliance with research protocols, and contributing to manuscripts, presentations, and conference submissions.
- Led review sessions and provided individual support to enhance student comprehension

System Engineering Intern **2024 Sep – 2025 Mar**

Airshare Inc., Ottawa

- Developed and implemented system models to optimize performance and validate design integrity.
- Established and maintained a stable communication framework, enhancing system reliability.
- Led sensor calibration and fusion processes, improving data accuracy and decision-making.
- Managed procurement and field testing to ensure project efficiency and high-quality outcomes.
